

## OFARM SUSTAINABLE TARGET PRICES

The historical levels represent prices received through ORGANIC COOPERATIVES and ASSOCIATIONS. The target prices represent the levels necessary to sustain a fair return for organic farmers. Because of the continued increase in consumer confidence in organic foods, these prices reflect the growing need for reliability in the supply of organic production. Price ranges reflect carrying charges as well as regional

### OFARM Pricing Goals include:

1. The full recovery of all actual production inputs including those unique to the production, handling, and marketing of organic livestock.
2. A return to labor and management that provides family income at levels that allow for the full involvement and adequate compensation of all members of this partnership in the operation of an organic production unit. This compensation must extend to the education, training and transition to a future generation of organic farmers.
3. Return to investment that provides for the acquisition and ownership of the land and related infrastructure required for organic food production.
4. Income enhancement to provide for support for the social and economic viability of the community.
5. Organic premium for production of healthy, wholesome food in an environmentally responsible manner.
